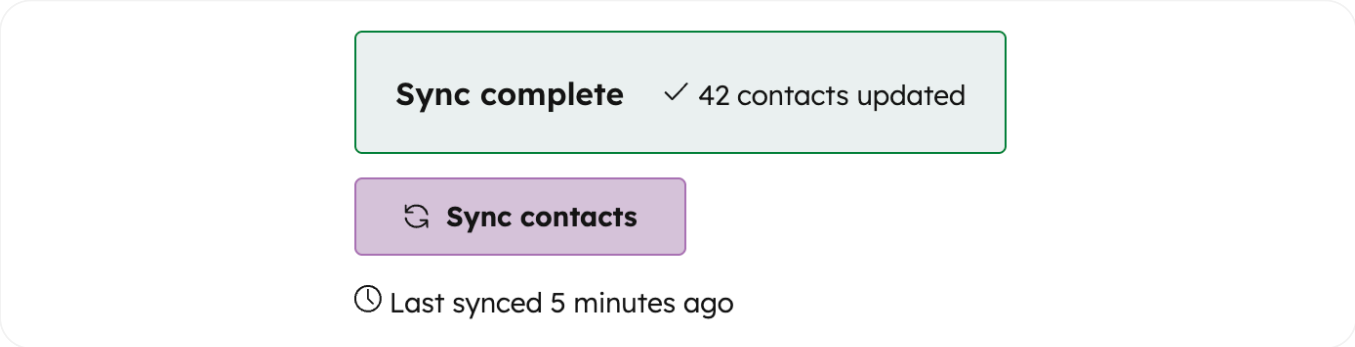
Standard components

Icon

Learn about the Icon component for use in UI extensions.

Use the `Icon` component to render a visual icon within other components. It can generally be used inside most components, excluding ones that don't support child components (e.g., the `Input` component does not support icons).

Always pair icons with text. If that's not possible, include the `screenReaderText` prop to convey the icon's meaning for users with screen readers.



HubSpot Developers

```
    <Flex align="start" direction="column" gap="sm">
      <Alert title="Sync complete" variant="success">
        <Icon name="success" /> 42 contacts updated
      </Alert>
      <Button variant="primary">
        <Icon name="refresh" /> Sync contacts
      </Button>
      <Text>
        <Icon name="clock" /> Last synced 5 minutes ago
      </Text>
    </Flex>
  );
};
```

`color`	`"alert" | "inherit" | "success" | "warning"` **Default:** `"inherit"`	The color of the icon. See the **colors section** for details.
`screenReaderText`	`string`	Sets the text that screen readers will

HubSpot Developers

		automatically based on the parent component. If you need to override the default size, you can specify one to use instead.
`testId`	`string`	Used by `findByTestId()` to locate this component in tests. **See: Testing utilities reference**

Colors

Using the `color` prop, you can set an icon to one of the following colors:

Default	Alert	Warning	Success
`color="inherit"`	`color="alert"`	`color="warning"`	`color="success"`

Spacing

By default, spacing is not added around the icon. However, To add a space between the icon and adjacent text, you can manually add a space with the space bar, or by using ` ` and `{" "}` as shown below.

HubSpot Developers

```
  <Button variant="primary">
    <Icon name="refresh" /> Sync contacts
  </Button>
  <Text>
    <Icon name="clock" />{" "}Last synced 5 minutes ago
  </Text>
</>
```
