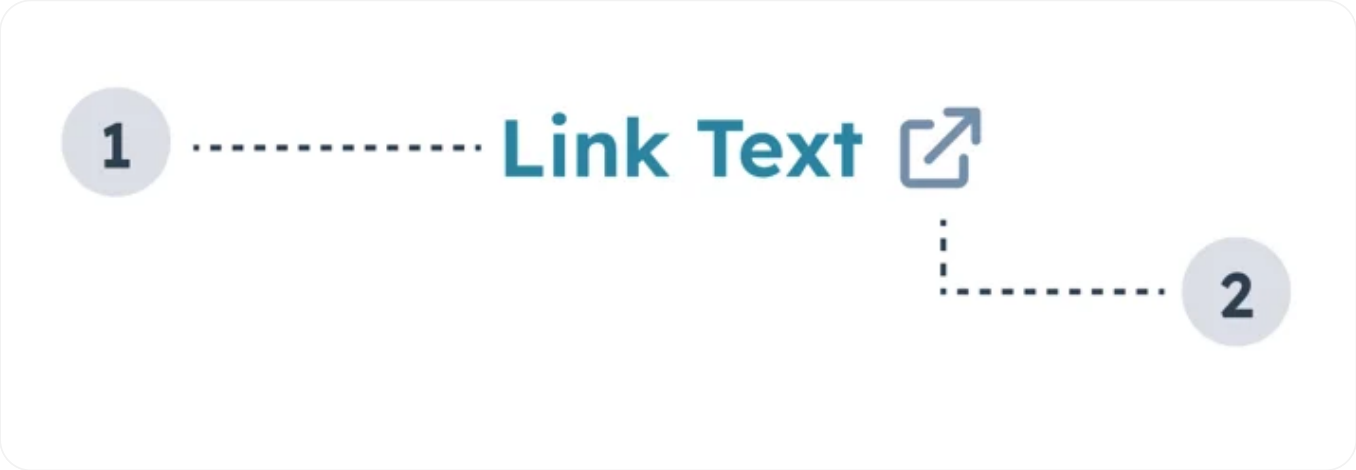
Standard components

Link

Learn about the link component for use in UI extensions.

The `Link` component renders a clickable hyperlink. Use links to direct users to a web page, another part of the HubSpot app, or use them as buttons.



1. **Link text:** text that describes where the link leads.
2. **External link icon**: included when setting `external` to `true` . and indicates that the link will open in a new tab. Automatically included when the link leads to a page outside of the HubSpot app.

HubSpot Developers

```
    <Link
      href={{
        url: "https://www.wikipedia.org",
        external: true,
      }}
    >
      Wikipedia
    </Link>
  );
};
```

Props

Prop	Type	Description
`href`	Object	Sets the link's URL and open behavior. Contains the following fields: `url` (string): the URL that will open on click. `external` (boolean): set to `true` to open the URL in a new tab and display an external link icon. By default: Links to HubSpot app pages will open in the same tab and will not include an icon. Links to non-HubSpot app pages will open in a new tab and include the icon.
`onClick`	`() => void`	A function that is invoked when the link is clicked. The function receives no arguments and its return value is ignored.
`overlay`	Object	Include a or component in this object to open it as an overlay on click. Learn more about .
`preventDefault`	Boolean	When set to `true`, `event.preventDefault()` will be invoked before the `onClick` function is

'destructive'

Variants

Using the `variant` prop, you can set the following styling:

`'primary'` : the default blue (`#0091ae`).

Primary variant

`'light'` : a white link that turns to a lighter shade of blue on hover (`#7fd1de`).

Light variant

`'dark'` : a darker shade of blue (`#33475b`).

Dark variant

`'destructive'` : a red link (`#f2545b`).

Destructive variant

Usage examples

Use the default `'primary'` variant when you want to link to another page or contact record in HubSpot.

Use the `'light'` variant when you want to include a link on a dark background.

Use the `'dark'` variant to include a link in an alert.

Use the `'destructive'` variant when the link results in an action that can't be undone by the user, such as deleting contact property information.

DO: make link text concise and contextual.

DO: use the `'destructive'` variant sparingly and only when the action can't be undone.

DO: always open links to pages outside of the HubSpot app in a new tab (`external: true`).

DON'T: crowd multiple links together.

DON'T: use the `'dark'` variant outside of alerts.
