Standard components

LoadingSpinner

Learn about the LoadingSpinner component for use in UI extensions.

The `LoadingSpinner` component renders a visual indicator for when an extension is loading or processing data.

1. **Label:** the text that describes the loading state.
2. **Size:** the size of the component. From left to right: extra small (`'xs'`), small (`'sm'` , default), medium (`'md'`).
3. **Layout:** the positioning of the spinner. From left to right: `inline` , `centered` .

```
import { LoadingSpinner } from "@hubspot/ui-extensions";

const Extension = () => {
  return <LoadingSpinner label="Loading..." />;
};
```

Props

HubSpot Developers

›

`layout`	`inline` (default) | `centered`	The position of the spinner.
`showLabel`	Boolean	When set to `true`, the `label` will appear next to the spinner. Default is `false`.
`size`	`'xs'`, `'extra-small'` | `'sm'`, `'small'` (default) | `'md'`, `'medium'`	The size of the spinner.

Usage examples

A loading state after the user submits form data to an external system (e.g., “Submitting contact details”).

A loading state as the card retrieves customer purchase history from an external system (e.g., “Loading purchase history”).

Guidelines

DO: keep label text as concise as possible.

DO: use label text to describe what’s happening during the loading process.

DO: use complete sentences in label text.

DON’T: include multiple loading spinners at once in a single card to avoid confusion.
