Standard components

ScoreCircle

Learn about the ScoreCircle component for use in UI extensions.

The `ScoreCircle` component displays a score value (0-100) as a circular progress indicator with color-coded status. Color is automatically applied based on the **score value**.

Use this component to provide data visualization for use cases such as:

- Completion percentages for tasks or projects.
- Quality scores or performance metrics.
- Health scores or ratings.

```
import { ScoreCircle, Flex } from '@hubspot/ui-extensions';

hubspot.extend(() => (
  <Flex direction="row" gap="large" justify="center">
    <ScoreCircle score={85} />
    <ScoreCircle score={62} />
    <ScoreCircle score={25} />
  </Flex>
));
```

Props

Score values

The component automatically validates score values and applies color-coded statuses based on the score value:

Success (green): score >= 66

Warning (yellow): score >= 33 and < 66

Alert (red): score < 33

The component includes automatic handling for invalid scores:

If the score is less than 0 or greater than 100, an error is logged and the component displays `-` instead of the score.

If the score is a decimal value, it is automatically rounded down to the nearest integer and a warning is logged.

Accessibility

The component includes the following accessibility features:

Uses the `meter` **ARIA role** to indicate a scalar measurement.

Provides `aria-valuenow`, `aria-valuemin`, and `aria-valuemax` attributes for screen readers.

Includes an accessible label describing the score value or error state.

Guidelines

DO: provide context around the score with additional text or labels.

DO: use the automatic color coding to communicate status at a glance.

DON'T: use `ScoreCircle` for values outside the 0-100 range.
