Standard components

Statistics

Learn about the Statistics component for use in UI extensions.

The `Statistics` component renders a visual spotlight of one or more data points. Includes the `StatisticsItem` and `StatisticsTrend` subcomponents.

1. `StatisticItem` **label:** the `statisticItem` 's label text.
2. `StatisticItem` **number:** the `statisticItem` 's primary number.
3. `StatisticTrend` **value:** the percentage trend value.
4. `StatisticTrend` **direction:** the direction if the trend arrow (up or down).

HubSpot Developers

```
    <Statistics>
      <StatisticsItem label="Item A Sales" number="10000">
        <StatisticsTrend direction="decrease" value="200%" />
      </StatisticsItem>
      <StatisticsItem label="Item B Sales" number="100000">
        <StatisticsTrend direction="increase" value="100%" />
      </StatisticsItem>
    </Statistics>
  );
};
```

Props

`<StatisticsItem>` props

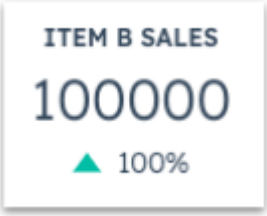
Prop	Type	Description
`id`	String	The statistic item's unique identifier.
`label`	String	The item's label.
`number`	String | number	The string to be displayed as the item's primary number.

`<StatisticsTrend>` props

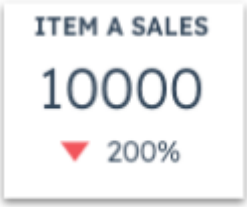
Prop	Type	Description
`color`	`'red'` | `'green'`	The color of the trend arrow.
`direction`	`'increase'` (default) | `'decrease'`	The direction of the trend arrow.
`value`	String	The text to be displayed as the trend value.

Variants

HubSpot Developers



`decrease` : for subtractions or negative progression for a given time period.



Note that the positive or negative movement of a given statistic is intended solely to represent the increase or decrease in numerical value. Be mindful of how these movements can communicate sentiment. For example, a decrease in support volume can be a net positive, which can be confusing when represented by a red, downward arrow.

Usage examples

Calling out the progress of quarterly sales for a company.

Monitoring the amount of traffic and social media engagement that a contact has for the month.

Guidelines

DO: keep statistics labels short and concise.

DO: place statistics components towards the top of a card when possible to enable users to more easily scan information without scrolling.

DON'T: include more than three statistics components per card if possible.

DON'T: use more than four statistics components side by side.

DON'T: include sensitive data that you don't want all users to see.
