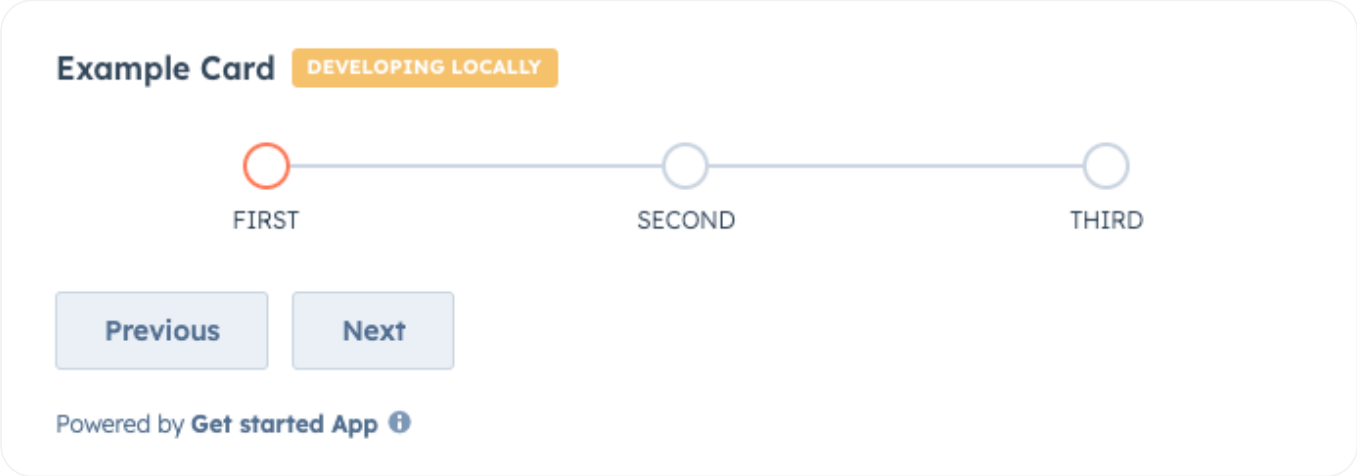
Standard components

StepIndicator

Learn about the StepIndicator component for use in UI extensions.

The `StepIndicator` component renders an indicator to show the current step of a multi-step process.



HubSpot Developers

```
function Extension() {
  const [currentStep, setCurrentStep] = useState(0);

  return (
    <Flex direction="column" gap="md">
      <StepIndicator currentStep={currentStep} stepNames={["First", "Second", "
      <Box>
        <Button onClick={() => setCurrentStep(currentStep - 1)}>Previous</Buttc
        <Button onClick={() => setCurrentStep(currentStep + 1)}>Next</Button>
      </Box>
    </Flex>
  );
}
```

Props

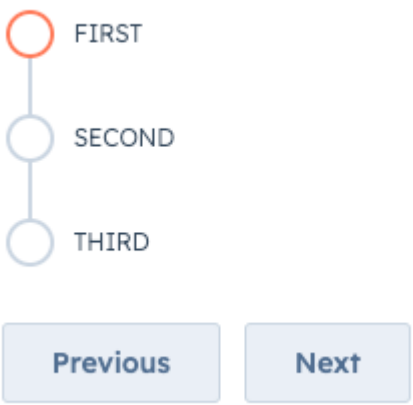
Prop	Type	Description
`circleSize`	`'xs'` , `'extra-small'` , | `'sm'` , `'small'` (default) | `'md'` , `'medium'` | `'lg'` , `'large'` | `'xl'` , `'extra-large'`	The size of the indicator circles. See the for examples of sizing.
`currentStep`	Number	The currently active step. Steps are zero-based, meaning the first step is assigned `0` .
`direction`	`'horizontal'` (default) | `'vertical'`	The orientation of the indicator.
`onClick`	`(stepIndex: number) => void`	A function that is invoked when a step in the indicator is clicked. The function receives the current step index as an argument (zero-based). Use this to update the currently active step.
`stepNames`	Array	An array containing the name of each step.

HubSpot Developers

`flush` : only shows the title of the currently active step and removes left and right margin.

Variants

By default, the step indicator will be laid out horizontally, but you can use the `direction` prop to set the orientation to `vertical` instead.



In addition, you can set the size of the step circles using the `circleSize` prop, ranging from `'xs'` / `'extra-small'` to `'xl'` / `'extra-large'` .
