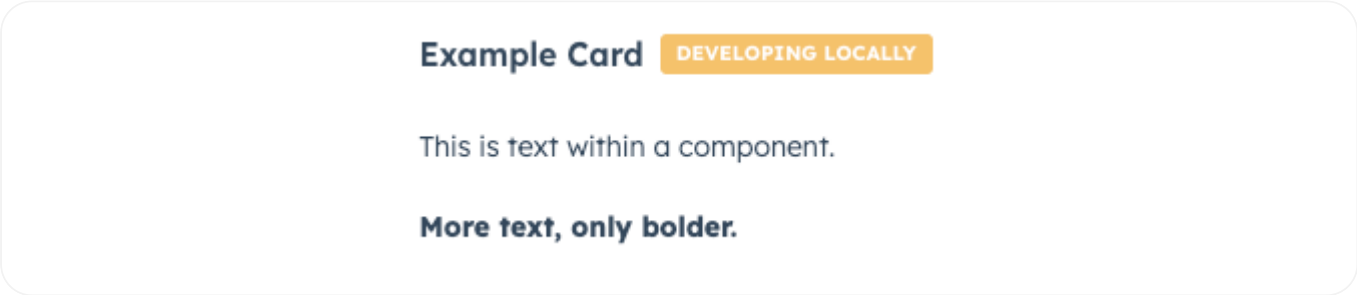
Standard components

Text

Learn about the Text component for use in UI extensions.

The `Text` component renders text with formatting options.



```
import { Text } from "@hubspot/ui-extensions";

const Extension = () => {
  return (
    <>
      <Text truncate={{ tooltipText: "string", maxWidth: 68 }}>Truncated text</
      <Text>Plain text</Text>
      <Text format={{ fontWeight: "bold" }}>Bold</Text>
      <Text format={{ italic: true }}>Italics</Text>
      <Text format={{ fontWeight: "bold", italic: true }}>Bold and Italic text<
      <Text format={{ lineDecoration: "strikethrough" }}>Strikethrough Text</Te
      <Text variant="microcopy">
        Microcopy text
        <Text inline={true} format={{ fontWeight: "bold" }}>
          with inner bold
        </Text>
      </Text>
    </>
  );
};
```

HubSpot Developers

		`{ fontWeight: 'bold' }`
		`{ fontWeight: 'demibold' }`
		`{ italic: true }`
		`{ lineDecoration: 'strikethrough' }`
		`{ lineDecoration: 'underline' }`
		`{ textTransform: '...' }` - Controls text capitalization
		
		See the **variants section** for more information.

`inline`	Boolean	When set to `true`, will insert text without breaking the line. Default is `false`.
`truncate`	Boolean | object	Truncates long strings to a single line. If the full string doesn't fit on one line, the excess text will display in a tooltip on hover. `false` (default): text is not truncated. `true`: truncates text to a single line. Full text will display in a tooltip on hover. Alternatively, set this prop to one of the following objects to specify truncate options: `{tooltipText: 'string'}`: truncates the string and sets the contents of the tooltip. `{maxWidth: number}`: sets the width of the line in pixels.
`variant`	`'bodytext'` (default) | `'microcopy'`	The style of text to display. See the **variants section** for more information.

Variants

Using the `format` prop, you can style text with a number of options:

- `{fontWeight: 'bold'}`: sets the text to bold.
- `{fontWeight: 'demibold'}`: sets the text to a lighter bold.

HubSpot Developers

›

`{textTransform: 'none'}` : no capitalization changes (default)

`{textTransform: 'uppercase'}` : transforms all characters to uppercase

`{textTransform: 'lowercase'}` : transforms all characters to lowercase

`{textTransform: 'capitalize'}` : capitalizes the first letter of each word

`{textTransform: 'sentenceCase'}` : capitalizes the first letter of the text and makes the rest lowercase

`<Text inline={true}>` : enables you to set text styling within the same line by adding more text without breaking the line if possible. Line will still break when text content would extend past the boundaries of its container. For example: `<Text>Text <Text inline={true} format={{fontWeight: 'bold'}}> with inner bold.</Text>` .

Plain text

Bold

Italics

Bold and Italic text

~~Strikethrough Text~~

Microcopy text**with inner bold**

You can also control text size with the `variant` prop.

`variant="bodytext"` (default)

Standard size text (bodytext)

`variant="microcopy"`

Smaller size text (microcopy)

HubSpot Developers

Guidelines

DO: use text with clear messaging.

DO: use text formatting thoughtfully. For example, don't bold all of the text that can be seen. Instead, only bold key words and phrases for easier scanning.

DON'T: use the text component for the primary textual information on a card. Instead, consider using the **Heading component**.

DON'T: use underline formatting for text that's next to a hyperlink, as it will also look clickable.

DON'T: use microcopy for important or critical information. Instead, consider whether an **Alert component** would fit better.

DON'T: use text components in place of headers, alerts, and errors.
