Standard components

Tile

Learn about the Tile component for use in UI extensions.

The `Tile` component renders a square tile that can contain other components. Use this component to create groups of related components.

This is the default tile. It has a small amount of left padding

```
import { Tile, Text } from "@hubspot/ui-extensions";

const Extension = () => {
  return (
    <>
      <Tile>
        <Text>This is the default tile. It has a small amount of left padding</
      </Tile>
      <Tile compact={true}>
        <Text>This is a compact tile. It reduces the amount of padding within.<
      </Tile>
      <Tile flush={true}>
        <Text>This is a flush tile. It has no left padding</Text>
      </Tile>
    </>
  );
};
```

Props

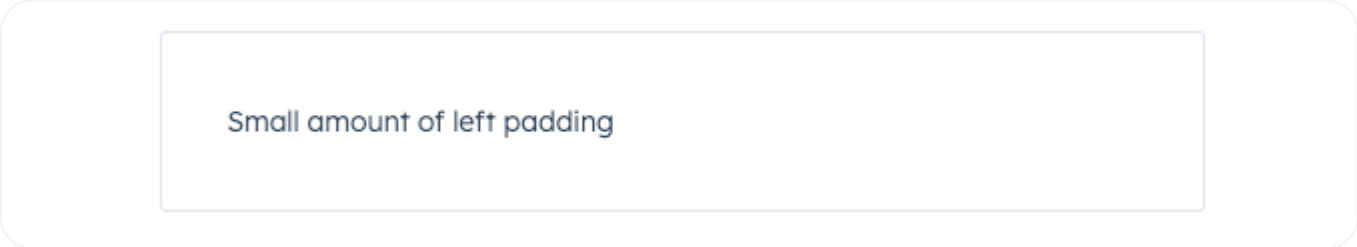
HubSpot Developers

`flush`	Boolean	When set to `true`, removes left and right padding from the tile contents. Default is `false`.

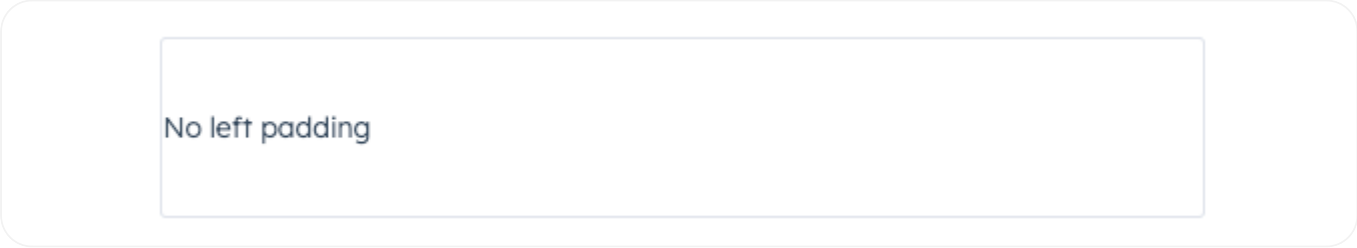
Variants

Using the `flush` prop, you can remove left and right padding from the tile contents.

`flush={false}` (default)



`flush={true}`



Usage examples

Group a form and its inputs together.

Group a bulleted text summary and statistics components together.
