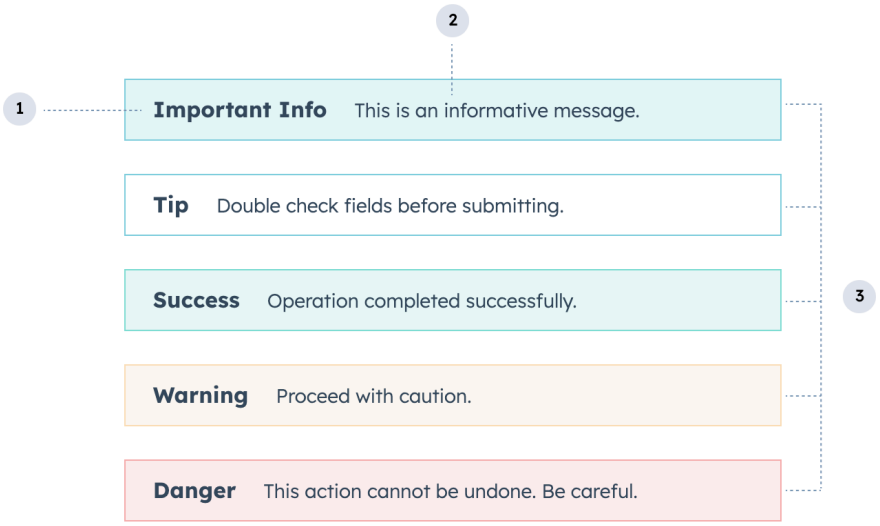
Standard components

Alert

Learn about the Alert component for use in UI extensions.

Use the `Alert` component to render an alert within a card. Use this component to give usage guidance, notify users of action results, or warn them about potential issues or failures. Alerts can be placed in components statically or triggered dynamically as the result of an action.

If you want to render an alert banner at the top of the page, Learn more about the **AddAlert method**.



1. **Title:** the alert's bolded title text which should summarize its intent or an action outcome.
2. **Body:** the descriptive text that follows the title, which should provide the user with the necessary information to proceed.
3. **Variant:** the color of the alert. Learn more about when to use each variant below.

HubSpot Developers

```
    <>
      <Alert title="Important Info">This is an informative message.</Alert>
      <Alert title="Tip" variant="tip">
        Double check fields before submitting.
      </Alert>
      <Alert title="Success" variant="success">
        Operation completed successfully.
      </Alert>
      <Alert title="Warning" variant="warning">
        Proceed with caution.
      </Alert>
      <Alert title="Danger" variant="danger">
        This action cannot be undone. Be careful.
      </Alert>
    </>
  );
};
```

Props

Prop	Type	Description
`title` Required	`string`	The bolded text of the alert.
`children`	`ReactNode`	The main content of the alert message.
`testId`	`string`	Used by `findByTestId()` to locate this component in tests. See:
`variant`	`"danger" | "error" | "info" | "success" | "tip" | "warning"` Default: `"info"`	The color of the alert. See for more information.

Variants

Important Info This is an informative message.

`'tip'` : a white alert to provide guidance and tips.

Tip Double check fields before submitting.

`'success'` : a green alert to indicate the successful completion of a task or to convey a positive CRM record status.

Success Operation completed successfully.

`'warning'` : a yellow alert for general warnings related to the performance of the system or the status of the CRM record.

Warning Proceed with caution.

`'danger'` : a red alert indicating an error, the degradation of a system, or a negative CRM record status. You should not use this alert type for anything other than errors and negative statuses.

Danger This action cannot be undone. Be careful.

Usage examples

Use an `'info'` alert to add instructions to a custom card, such as “Fill out this form using the contact’s company information.”

Use a `'success'` alert when a user successfully submits a form in the UI extension, or to convey that a contact qualifies for enrollment in a promotional offering.

Guidelines

DO: use alert text that clearly communicates to the user what they need to know.

DO: make alert text actionable, especially for error alerts which should provide a clear path to resolution.

DO: use proper punctuation, such as periods and question marks at the end of the descriptive text.

DO: set the alert as the first component in the extension when possible for visibility. Extensions with alerts should also be placed at the top of the CRM record by a HubSpot admin. Learn more about **customizing CRM record tabs**.

DON'T: use exclamation points in warning or error alerts. Exclamation points should only be used for short, positive messages (e.g. "Great!" or "Well done!").
