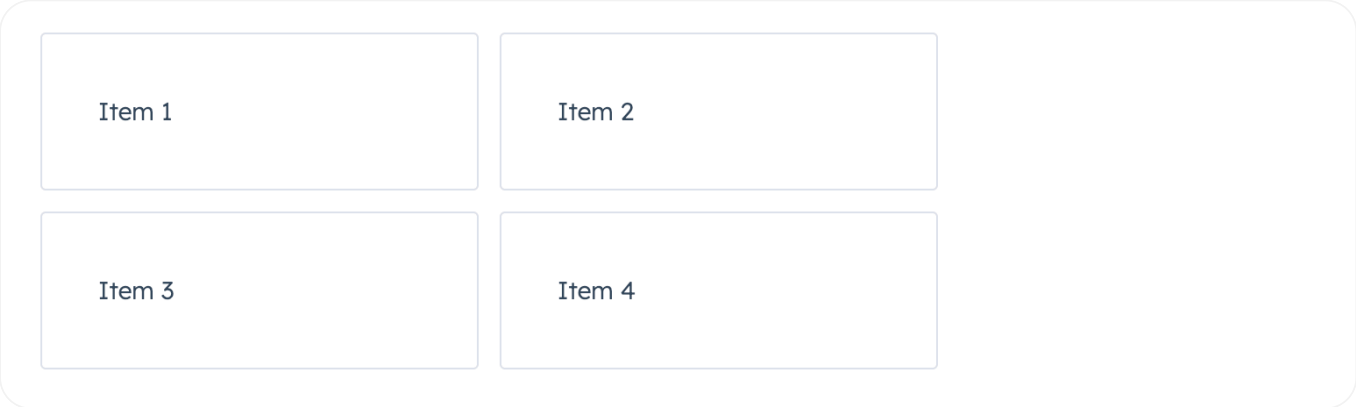
Standard components

AutoGrid

A responsive grid layout component that automatically arranges components.

Use the `AutoGrid` component to arrange components into columns based on available space and specified column width restraints. Includes two modes: fixed column sizing (default), and flexible column sizing. For both modes, the layout will be responsive automatically, whether you're using it in an app card, app home page, or app settings page.



```
import { AutoGrid, Tile } from "@hubspot/ui-extensions";

<AutoGrid columnWidth={250} gap="small">
  <Tile>Item 1</Tile>
  <Tile>Item 2</Tile>
  <Tile>Item 3</Tile>
  <Tile>Item 4</Tile>
</AutoGrid>;
```

Props

HubSpot Developers

›

`children`	`ReactNode`	Sets the content that will render inside the component. This prop is passed implicitly by providing sub-components.
`flexible`	`boolean` Default: `false`	When `false`, columns have exact `columnWidth`. When `true`, columns expand equally to fill available space with `columnWidth` as the minimum.
`gap`	`"extra-large" | "extra-small" | "flush" | "large" | "lg" | "md" | "medium" | "sm" | "small" | "xl" | "xs"` Default: `"flush"`	Sets spacing between grid items.
`testId`	`string`	Used by `findByTestId()` to locate this component in tests. See: Testing utilities reference

Examples

Flexible grid with minimum column width

With `flexible` set to `true`, the specified `columnWidth` is used as a minimum width. Compare the width of the tiles in this example to the example at the top of the page, which doesn't include `flexible={true}`.

HubSpot Developers

```
  <Tile>Item 2</Tile>
  <Tile>Item 3</Tile>
  <Tile>Item 4</Tile>
</AutoGrid>;
```

Fixed card layout with large gap

Product A
Description here

Product B
Description here

Product C
Description here

```
import { AutoGrid, Card, Heading, Text } from "@hubspot/ui-

<AutoGrid columnWidth={300} gap="large" flexible={false}>
  <Card>
    <Heading>Product A</Heading>
    <Text>Description here</Text>
  </Card>
  <Card>
    <Heading>Product B</Heading>
    <Text>Description here</Text>
  </Card>
</AutoGrid>;
```
