Button design patterns

Learn about the design patterns HubSpot recommends for using buttons in app cards.

Include `Button` components to enable users to perform actions in app cards, such as submitting a form, sending data to an external system, or deleting data.

Follow the design patterns below to keep your app card consistent with HubSpot's designs. To learn more about implementation, check out the **Button component reference documentation**.

Patterns

Variants

Only include one `primary` button per surface (e.g., one per panel, one per modal). The button should be reserved for the main action that a user can perform.

To avoid confusion, don't pair `destructive` variant buttons with `primary` buttons. Limit button pairings to either `primary` and `secondary` or `destructive` and `secondary`.

In general, use the default button size. You should only be sizing down if it's necessary for the space that the button is being placed in (e.g., in a table with narrow rows).

Alignment

Always position buttons at the bottom of **Form**, **Modal** and **Panel** components.

Buttons should always be aligned to the left. When pairing `primary` and `secondary` variant buttons, the `primary` button should appear as the leftmost button. The only time you should align a button to the right of a
