CRM action components

CrmActionButton

Learn about the CrmActionButton component for use in UI extensions.

The `CrmActionButton` component renders a button that can execute a built-in set of **CRM actions**.

This type of component is useful for enabling your extension to interact with other CRM entities, such as records and engagements. To learn more about how CRM action components work together, check out the **CRM action components overview**.

```
import { CrmActionButton } from "@hubspot/ui-extensions/crm"

<CrmActionButton
  actionType="PREVIEW_OBJECT"
  actionContext={{
    objectTypeId: "0-3",
    objectId: 123456,
  }}
  variant="secondary"
>
  Preview deal
</CrmActionButton>;
```

›

`actionType`	String	The type of action to perform. See **list of available actions** for more information.
`disabled`	Boolean	When set to to `true`, button renders in a disabled, greyed-out state and cannot be clicked.
`onError`	`(errors: string[]) => void`	An optional callback that will pass any error messages that were generated. Common errors include missing required context values or the user not having sufficient permissions to perform an action.
`size`	`'xs'`, `'extra-small'` | `'sm'`, `'small'` | `'md'`, `'medium'` (default)	The size of the button.
`type`	`'button'` (default) | `'reset'` | `'submit'`	The button's HTML `role` attribute.
`variant`	`'primary'` | `'secondary'` (default) | `'destructive'`	The color variation of the button.

Variants

Using the `variant` prop, you can set the color of the button.

`'primary'`: a dark blue button for the most frequently used or most important action on an extension. Each extension should only have one primary button.

`'secondary'`: a grey button to provide alternative or non-primary actions. Each extension should include no more than two secondary buttons.
