CRM action components

CrmActionLink

Learn about the CrmActionLink component for use in UI extensions.

The `CrmActionLink` component renders a clickable link that can execute a built-in set of **CRM actions**.

This type of component is useful for enabling your extension to interact with other CRM entities, such as records and engagements. To learn more about how CRM action components work together, check out the **CRM action components overview**.

Add a note about this deal to the record

```
import { CrmActionLink } from "@hubspot/ui-extensions/crm";

const dealContext = {
  objectTypeId: "0-3",
  objectId: 14795354663,
};

hubspot.extend(({ context, runServerlessFunction, actions }) => {
  return (
    <>
      <CrmActionLink actionType="ADD_NOTE" actionContext={dealContext}>
        Add a note about this deal to the record
      </CrmActionLink>
    </>
  );
});
```

Props

HubSpot Developers

›

`actionType`	String	The type of action to perform. See **list of available actions** for more information.
`onError`	`(errors: string[]) => void`	An optional callback that will pass any error messages that were generated. Common errors include missing required context values or the user not having sufficient permissions to perform an action.
`variant`	`'primary'` (default) | `'light'` | `'dark'` | `'destructive'`	The color variation of the link. See the **variants section** for more information.

Variants

Using the `variant` prop, you can control the color of the link.

`'primary'` : the default blue (`#0091ae`).

Primary variant

`'light'` : a white link that turns to a lighter shade of blue on hover (`#7fd1de`).

Light variant

`'dark'` : a darker shade of blue (`#33475b`).

Dark variant

`'destructive'` : a red link (`#f2545b`).

Destructive variant
