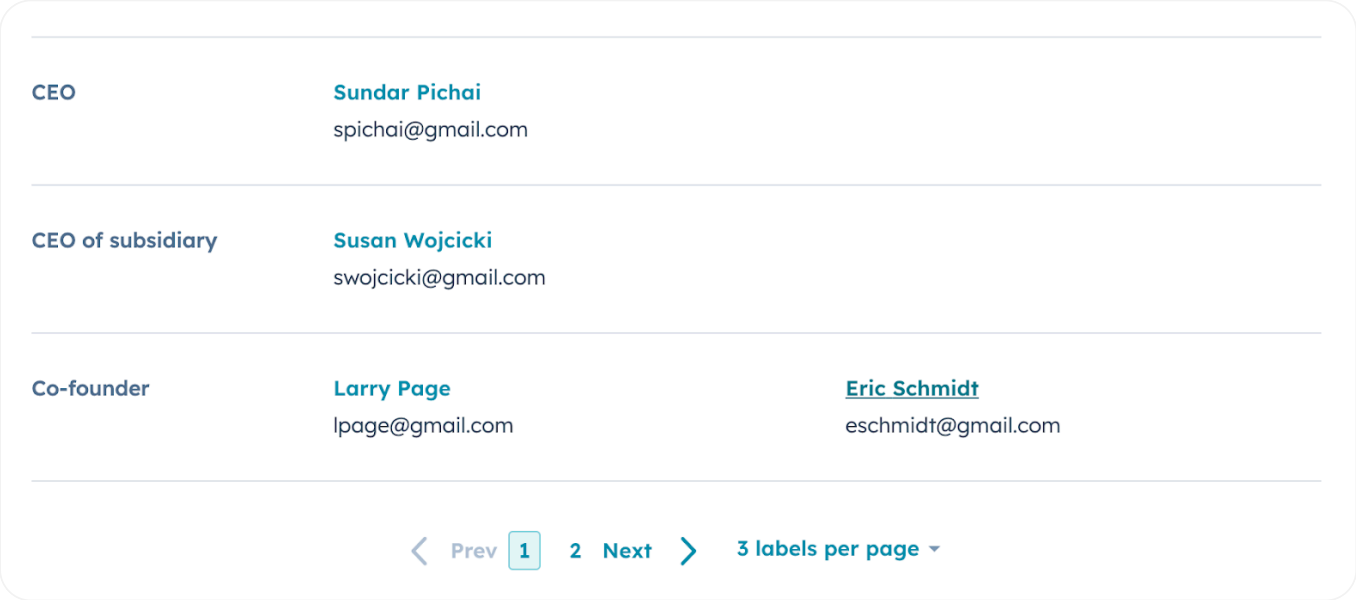
CRM data components

CrmAssociationPivot

Learn about the AssociationPivot component for use in UI extensions.

The `CrmAssociationPivot` component is a CRM data component that renders a list of associated records organized by their assigned **association label**. You'll specify the type of records that you want to appear along with table attributes such as pagination, sorting, and more. You can either return all labels or specify the labels to return.



HubSpot Developers

```
    <CrmAssociationPivot
      objectTypeId="0-1"
      associationLabels={["CEO", "CEO of subsidiary", "Co-founder"]}
      maxAssociations={10}
      preFilters={[
        {
          operator: "NOT_IN",
          property: "dealstage",
          values: ["closedwon"],
        },
      ]}
      sort={[
        {
          columnName: "createdate",
          direction: -1,
        },
      ]}
    />
  );
};
```

Props

Prop	Type	Description
`objectTypeId` Required	String	The numeric ID of the type of associated object to display (e.g., `0-1` for contacts). See of object IDs.
`associationLabels`	Array	Filters results by specific association labels. By default, all association labels will appear.
`maxAssociations`	Number	The number of items to return in each association label group before displaying a “Show more” button.
`preFilters`	Array	Filters the data by specific values of the associated records. Review the for more information.

HubSpot Developers

`columnName` : the column to sort by.

`direction` : the direction to sort by. Can be either `1` (ascending) or `-1` (descending). By default, order is ascending.
