CRM data components

# CrmDataHighlight

Learn about the CrmDataHighlight component for use in UI extensions.

The `CrmDataHighlight` component renders a list of properties along with their values. You can use this component to surface important property data from either the currently displaying record or another specified record.

```
import { CrmDataHighlight } from "@hubspot/ui-extensions/cr

const Extension = () => {
  return (
    <CrmDataHighlight properties={["createdate", "lifecyclestage", "hs_num_oper
  );
};
```

## Props

| Prop | Type | Description |
|---|---|---|
| `objectId` | String | The ID of the CRM record to display property data from. |
| `objectTypeId` | String | The numeric ID of the type of associated object to display (e.g., `0-1` for contacts). See of object IDs. |
