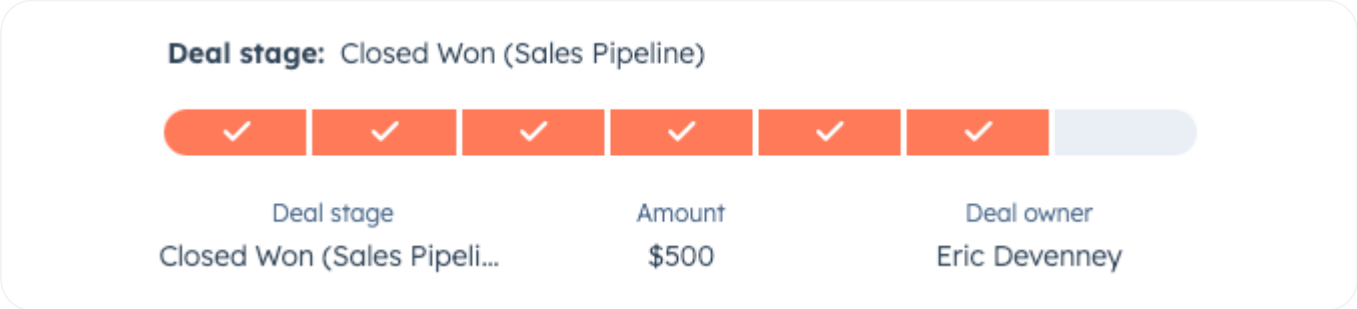
CRM data components

CrmStageTracker

Learn about the CrmStageTracker component for use in UI extensions.

The `CrmStageTracker` component renders a lifecycle or pipeline stage progress bar and a list of properties. Available for contacts, companies, deals, tickets, and custom objects.

Use this component to show stage progress for the currently displaying record, or you can specify a record. You can also edit the property values inline and your changes will automatically save when leaving the field or pressing Enter.



```
import { CrmStageTracker } from "@hubspot/ui-extensions/crm

const Extension = () => {
  return <CrmStageTracker objectId="13833764681" objectTypeId="0-3" properties=
};
```

Props

Prop	Type	Description
`objectId`	String	The ID of the CRM record to display property data from.
`objectTypeId`	String	The numeric ID of the type of associated object to display (e.g., `0-1` for contacts. See of object IDs.

HubSpot Developers

›

`showProperties`	Boolean	Whether to display the properties below the progress indicator. When set to `false`, properties will not display.
