Standard components

Form

Learn about the Form component for use in UI extensions.

The `Form` component renders a form that can contain other subcomponents, such as **Input**, **Select**, and **Button**. Use this component to enable users to submit data to HubSpot or an external system.

Below, learn how to implement a form in a UI extension. For guidance on form design, check out the **Form design patterns**.

1. **Label:** the input label.
2. **Text input:** an **Input** component with a placeholder value of *First name*.
3. **Label:** the select input label.
4. **Select input:** a **Select** component with value of *Customer*.
5. **Button:** a **Button** component to submit the form's information.

HubSpot Developers

```
    <Form
      onSubmit={() => {
        console.log("Form submitted!");
      }}
    >
      <Input
        label="First Name"
        name="first-name"
        tooltip="Please enter your first name"
        description="Please enter your first name"
        placeholder="First name"
      />
      <Input
        label="Last Name"
        name="last-name"
        tooltip="Please enter your last name"
        description="Please enter your last name"
        placeholder="Last name"
      />
      <Button
        onClick={() => {
          console.log("Submit button clicked");
        }}
        variant="primary"
        type="submit"
      >
        Submit
      </Button>
    </Form>
  );
};
```

Props

HubSpot Developers

›

		HTML attribute.
`onSubmit`	Function	The function that is called when the form is submitted. It will receive a `RemoteEvent` as an argument and its return value will be ignored.

Usage examples

A form to submit customer information to an external database.

A form to place a product order on behalf of a customer.

Guidelines

DO: include text inputs when a user should be able to submit any value.

DO: include select inputs when a user should only be able to select from a set of values.

DO: include descriptions and placeholder text to provide context to users.

DO: always position the submit button at the bottom of the form.

DON'T: include a form without a submit button.
