Standard components

# Heading

Learn about the Heading component for use in UI extensions.

The `Heading` component renders large heading text. Use this component to introduce or differentiate sections of your component.

Heading text

```
import { Heading } from "@hubspot/ui-extensions";

const Extension = () => {
  return <Heading>Heading text</Heading>;
};
```

## Props

| Prop | Type | Description |
|---|---|---|
| `children` Required | `ReactNode` | Sets the content that will render inside the component. This prop is passed implicitly by providing sub-components. |
| `inline` | `boolean` Default: `false` | When set to `true`, text will not line break. |
| `testId` | `string` | Used by `findByTestId()` to locate this component in tests. |

HubSpot Developers

## Usage example

The title at the top of an extension to introduce its content.

## Guidelines

**DO:** use headers to give users a summary of the information that the extension contains.

**DON'T:** use more than one heading for each page or section in the extension.

**DON'T:** use headers for paragraphs or long sentences.
