# HubSpot Marketplace | Provide testing credentials for your app

Follow these steps to provide testing credentials for your app when listing or certifying it on HubSpot Marketplace.

Valid testing credentials must be provided to **list** or **certify** your app on HubSpot Marketplace. This is necessary for the HubSpot Product team to verify listing and certification requirements, and also recommend areas for improvement.

## Before you begin

Review the following questions to find the appropriate instructions for providing testing credentials to the HubSpot Product team:

1. Does your app with HubSpot require an account for a platform/application/service other than HubSpot?

   If **yes**, (i.e. at least one other account is required), proceed to question 2.

   If **no**, follow the steps listed **here**.

2. Are you able to give HubSpot Product team members access to all platforms/applications/services required to use your app?

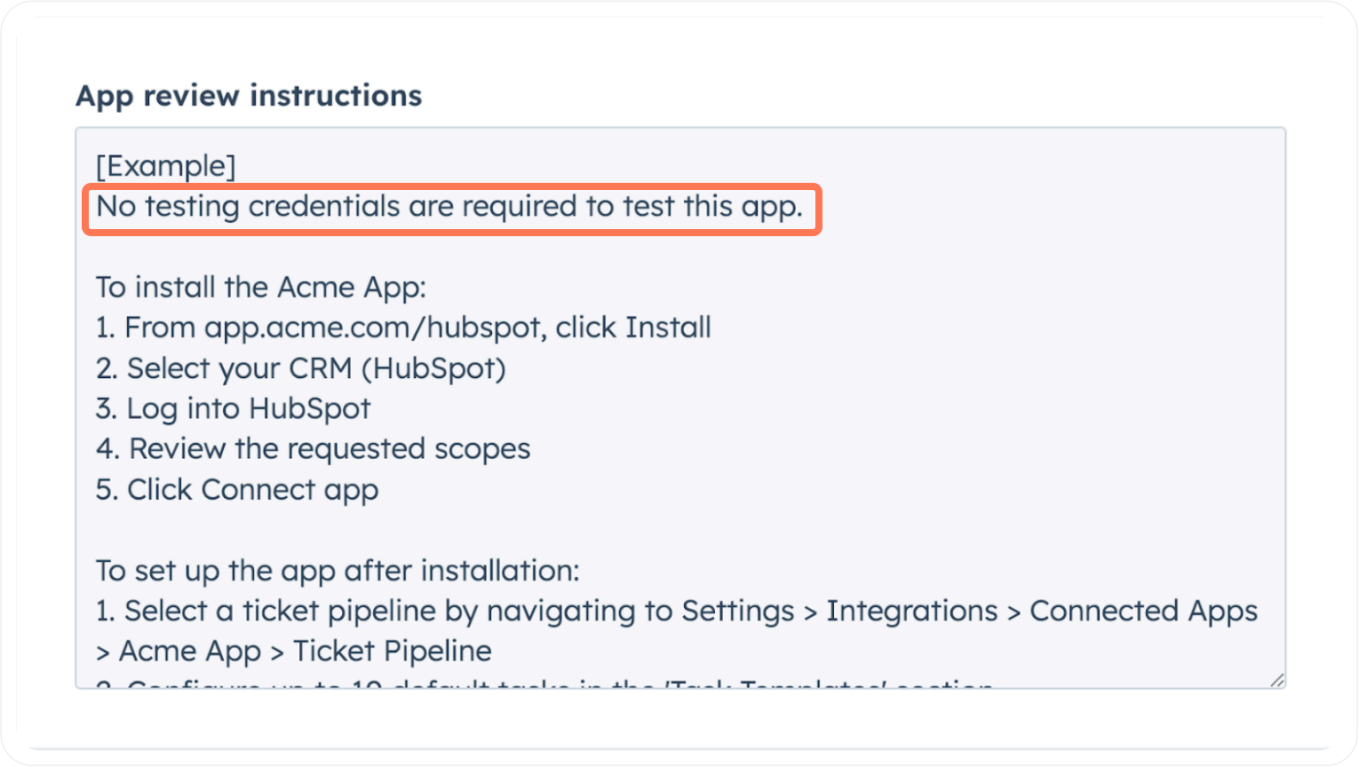
   If **yes**, (i.e. you are able to give HubSpot Product team members access to needed platforms/applications/services), follow the steps listed **here**.

   If **no**, (i.e. you are not able to give HubSpot Product team members access to at least one platform/application/service), follow the steps listed **here**.

## Provide your testing credentials

**If your app does not require a separate platform/application/service account:**

HubSpot Developers



**If your app requires a separate platform/application/service account and you are able to provide the HubSpot Product team with access:**

1. In the first line, list all platforms/applications/services required to fully use your app/integration.
2. For each required platform/application/service that you are able to give access to:

   Invite **marketplace-tester@hubspot.com** to all new or existing accounts. Ensure that these accounts have all features and permissions required to fully use your app with HubSpot.

   Include "Invite sent to **marketplace-tester@hubspot.com**" next to the platform you've added that user to. Do not ask the HubSpot Product team to create new accounts or sign up for free trials.
3. Describe the steps to install the app, configure app settings, and perform common actions with the app. If these instructions are publicly documented, you may hyperlink to the relevant documentation.

HubSpot Developers

1. Acme (Invite sent to marketplace-tester@hubspot.com.)
2. Acme Web Services (Invite sent to marketplace-tester@hubspot.com.)

To install the Acme App:
1. From app.acme.com/hubspot, click Install
2. Select your CRM (HubSpot)
3. Enter your credentials
4. Click Done
5. Select your HubSpot account
6. Review the requested scopes
7. Click Connect app

**If your app requires a separate platform/application/service account and you are not able to provide the HubSpot Product team with access:**

1. In the first line, list all platforms/applications/services required to fully use your app/integration.
2. For each required platform/application/service that you are able to give access to:

   Invite **marketplace-tester@hubspot.com** to all new or existing accounts. Ensure that these accounts have all features and permissions required to fully use your app with HubSpot.

   Include "Invite sent to **marketplace-tester@hubspot.com**" next to the platform you've added that user to. Do not ask the HubSpot Product team to create new accounts or sign up for free trials.
3. For each platform/application/service that you are not able to give access to:

   Include an explanation on why you're unable to give the HubSpot Product team access.
4. Describe the steps to install the app, configure app settings, and perform common actions with the app. If these instructions are publicly documented, you may hyperlink to the relevant documentation.
5. Record a demo video that shows the app/integration performing actions with all required platforms, applications, or services. The demo video must meet the

HubSpot Developers

[Example]
Required platforms:
1. Acme (Invite sent to marketplace-tester@hubspot.com.)
2. Foo API (Can only be approved by Foo Corporation. See demo instead.)

To install the Acme App:
1. From app.acme.com/hubspot, click Install
2. Select your CRM (HubSpot)
3. Enter your credentials
4. Click Done
5. Select your HubSpot account

## Frequently Asked Questions

Should I connect my app to an existing HubSpot account?

Where will these testing credentials be stored?

Should I deactivate these testing credentials after my app has been listed or certified?

If I provide testing credentials for a listing review and apply for certification in the future, must I provide credentials again?
